Pesticide List Notification

The following is a list of pesticides that might be applied to your site. The type of pesticide that could be applied is determined based on the time of year, soil conditions, life stage of pest and bait acceptance. The rodenticides/pesticides that are applied for gophers and moles will always be applied underground. The rodenticides that are applied for ground squirrel and/or voles sometimes are applied by broadcast, sometimes burrow /spot baiting and sometimes in bait stations.
